| 10 | Institutions | Institutions | 20 EU Governance and government operations | Excluded 2003, 2007 |

Figure A1. Council and European Council attention to different policy areas

Note: To be able to compare, we standardized both measures to range from their minimum to maximum values. European Council attention is measured as explained in the main text. Häge (2016) measure Council working party attention as .5 days of sessions per time period (in our case per semester).

Table A2. Summary statistics for all variables, by country and policy type

| | | Regulatory policies | | | | | Core state policies | | | | |

Figure A2. EU debates of centrist and challenger parties

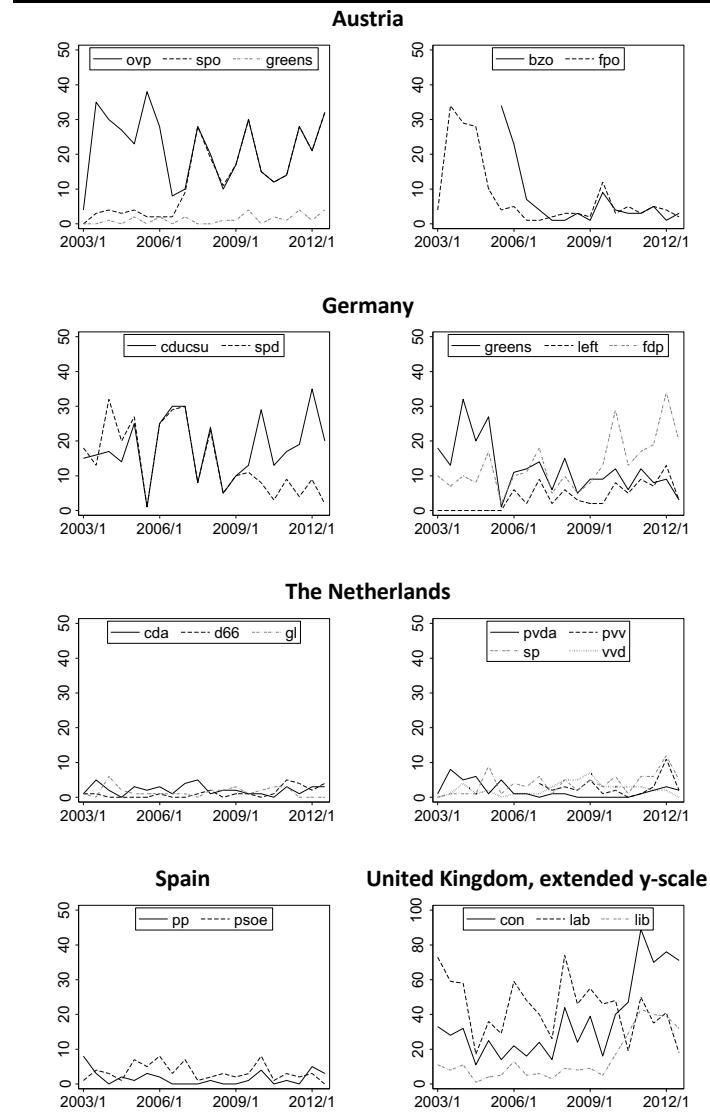

Figure A2 provides further information on the EU debates of different parties, as indicated in the paper's section “Mapping parliamentary debates”. The figure shows that British and German parties initiate more EU debates than their counterparts. This is also true of Austria. However, one should note important government effects. The Austrian SPÖ only starts initiating many EU debates upon joining the government. The British Liberal Democrats, the German Greens and FDP follow the same pattern. A closer look (not shown here) reveals that they co-sponsor government initiatives with their larger partners. Thus, they initiate more debates than in their opposition periods.

Figure A2 also provides additional information on challenger parties. The Left and PVV display some interest in the EU, albeit certainly not an unusual amount compared to the other parties. This is true too of the FPO and BZO, with the exception of them paying significant attention to the EU during their respective governmental terms in the early-mid 2000s. Afterwards their attention drops substantially. Close investigation (not shown) makes clear that they co-sponsored initiatives of their centrist government partner, the ÖVP, during this time. This gave them much more plenary time than after their time in government.

Finally, Figures A3 to A5 show that parties debate the entire range of EU policies with large variation over time and across parties.

Figure A11. European Council attention and EU debates across countries and policies

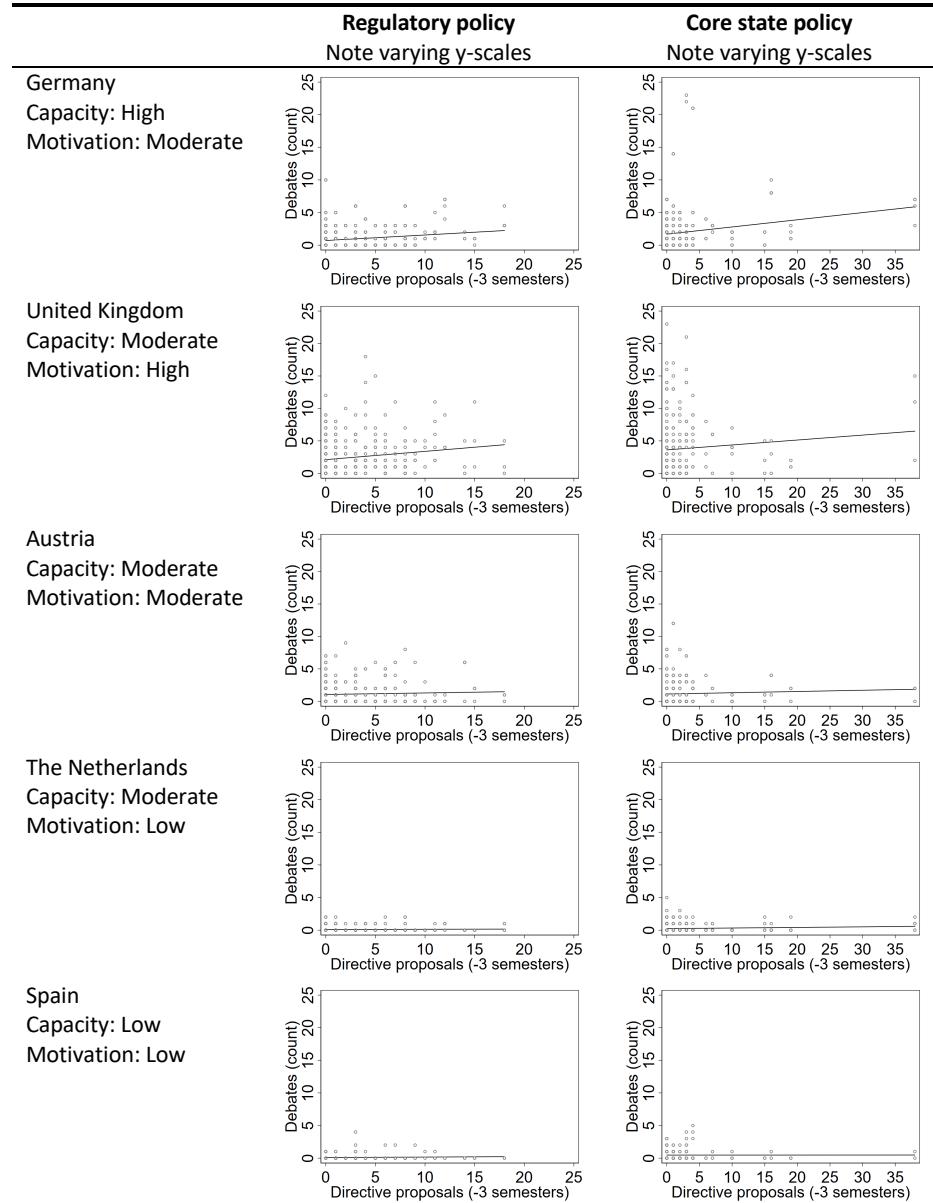

Note: See the section on country cases for the operationalization of capacity and motivation.

Figure A12. Directives and EU debate across countries and policies

Note: See the section on country cases for the operationalization of capacity and motivation.

Figure A13. Proposals (3-semester lag) and EU debate across countries and policies

Note: See the section on country cases for the operationalization of capacity and motivation.

Figure A14. Popular Euroscepticism and parliamentary EU debate, by country and policy

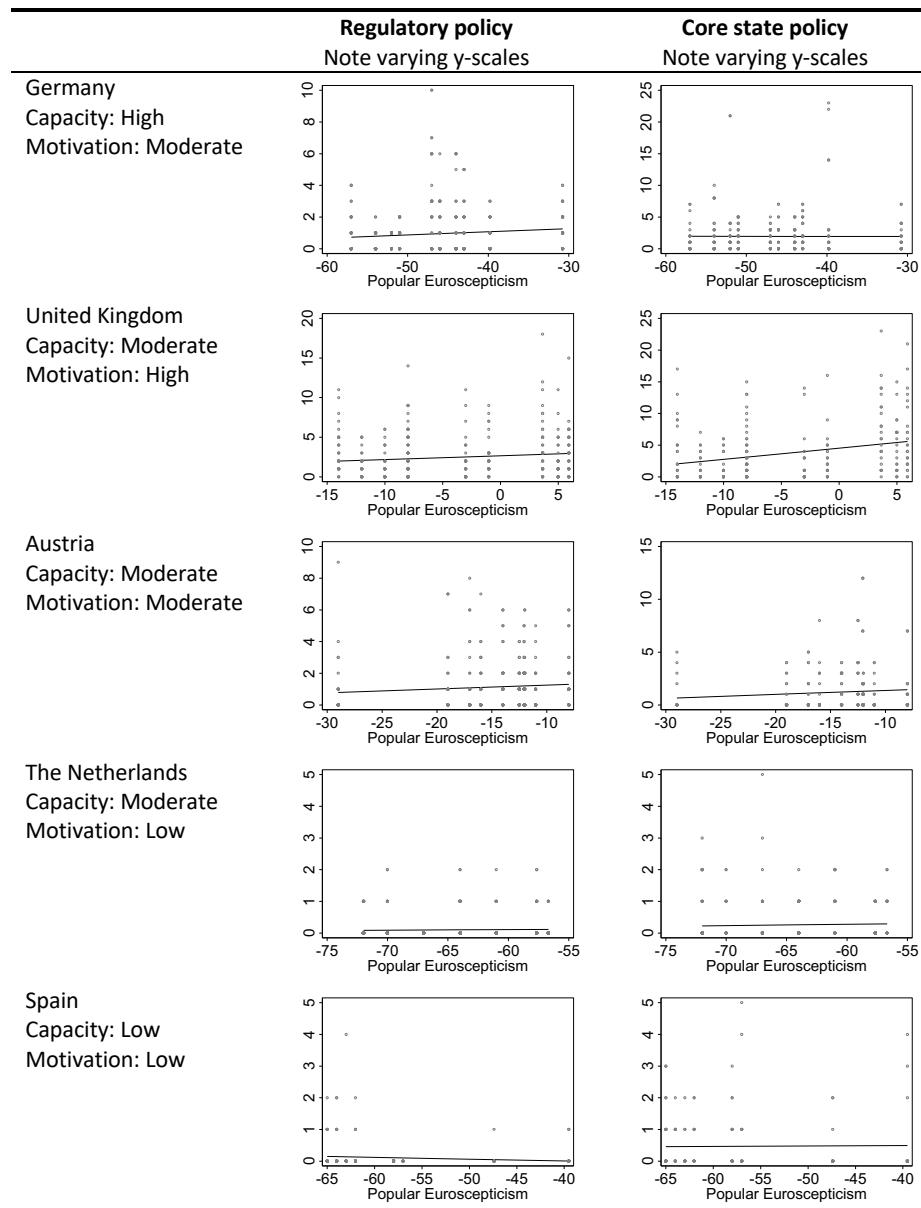

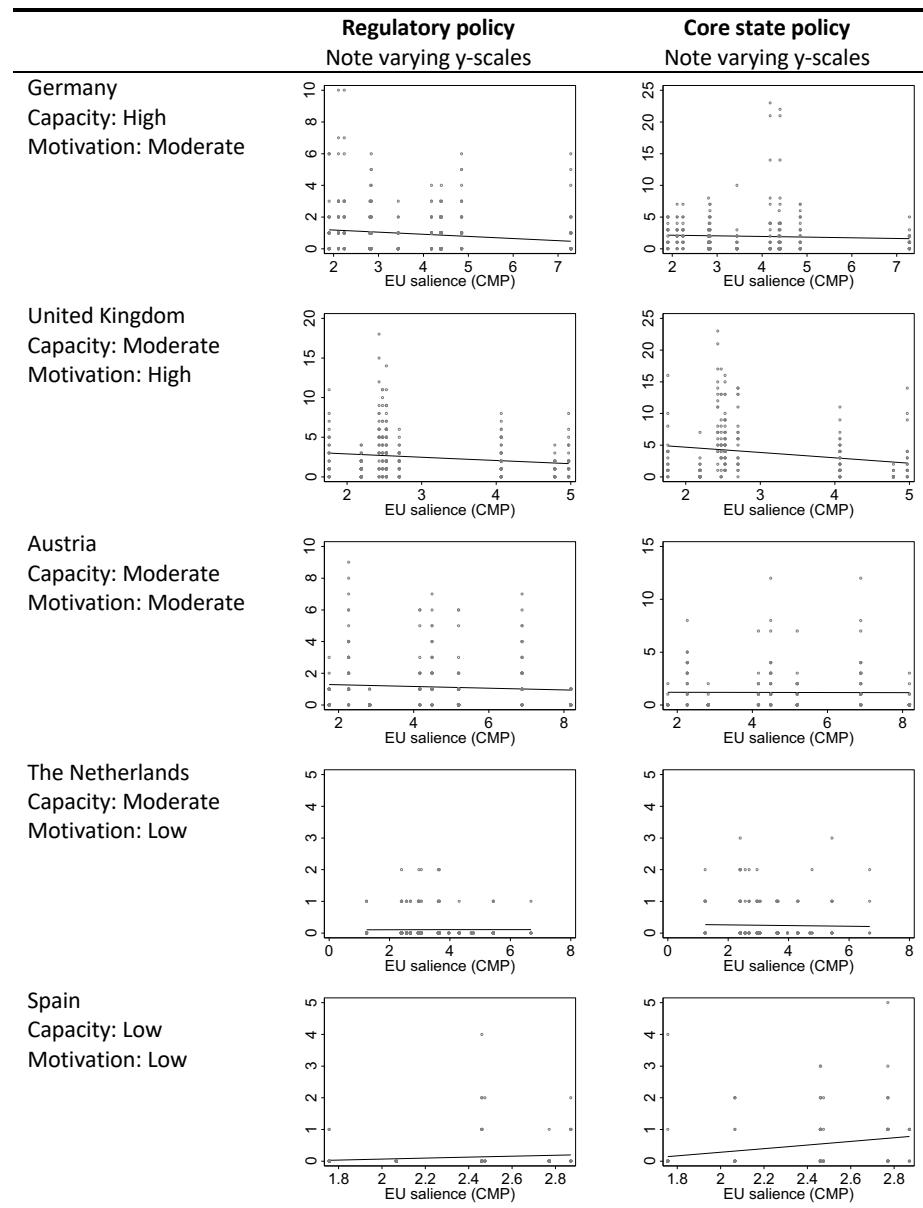

Figure A15. EU salience in the comparative party manifesto dataset and EU debate

Appendix 3: Model equation and trace plots

This appendix shows the full equation of the model referred to in the paper's section "Statistical analysis" (sub-section "model"). We also show trace plots for the models of British and German data, for key parameters of interest, respectively for regulatory and core state policies. The replication materials allow producing the remaining plots.

Equation

The full equation:

$$\begin{aligned}
 \text{Debates}_i &\sim \text{Poisson}(\lambda_i), \\
 \text{Log}(\lambda_i) &= \alpha + \alpha_{[i]} + \alpha_{\text{party}[j]} + \alpha_{\text{area}[k]} + \alpha_{\text{year}[l]} + \beta_1 * \text{govt}_i + \beta_2 * \text{seats}_i + \beta_3 * \text{election}_i + \\
 &\quad \beta_4 * \text{dissent}_i + \beta_5 * \text{eurcouncil}_i + \beta_6 * \text{directives}_i + \beta_7 * \text{proposals}_i, \\
 \alpha &\sim \text{Normal}(0, 2), \\
 \alpha_{[i]} &\sim \text{Normal}(0, \sigma_i), \\
 \alpha_{\text{party}[j]} &\sim \text{Normal}(0, \sigma_{\text{party}}), \\
 \alpha_{\text{area}[k]} &\sim \text{Normal}(0, \sigma_{\text{area}}), \\
 \alpha_{\text{year}[l]} &\sim \text{Normal}(0, \sigma_{\text{year}}), \\
 \beta_1 - \beta_6 &\sim \text{Normal}(0, 2), \\
 \sigma_i &\sim \text{Normal}(0.5, 0.5) \text{ & } \sigma_i \geq 0, \\
 \sigma_{\text{party}} &\sim \text{Normal}(0, 1) \text{ & } \sigma_{\text{party}} \geq 0, \\
 \sigma_{\text{area}} &\sim \text{Normal}(0, 1) \text{ & } \sigma_{\text{area}} \geq 0, \\
 \sigma_{\text{year}} &\sim \text{Normal}(0, 1) \text{ & } \sigma_{\text{year}} \geq 0.
 \end{aligned}$$

An explanation of this model can be found in the paper's section "Statistical analysis" (sub-section "model").
