Sensitizing the Behavioral-Immune System:
The Power of Social Pain

Word count: 4995

Keywords: COVID-19, social pain, self-protection, disease, behavioral-immune system

Abstract

People who believe they are invulnerable to infectious diseases often fail to protect themselves against the disease threats that others pose to them. The current paper tests the hypothesis that social pain – the experience of feeling interpersonally hurt or rejected – motivates people who would otherwise discount the disease threat posed by COVID-19 to protect themselves against it. We conducted 4 daily diary studies involving 2794 participants who reported how hurt/rejected they felt by those they knew, how personally concerned they were about the spread of illness/COVID-19, and how vigilantly they engaged in 6 different self-protective behaviors each day. Meta-analyzing the lagged analyses from all 4 studies revealed robust, replicable evidence that people who believed they were invulnerable to infectious disease engaged in more concerted efforts to protect themselves against COVID-19 when they were in acute social pain.

Despite the strong human need to connect to others (Baumeister & Leary, 1995), there are times when it makes sense to be wary of getting too close. Other individuals can cause us harm in multiple ways; they reject and ostracize us (Leary & Baumeister, 2000); they can also expose us to contagious diseases (Salathé et al., 2010). Fortunately, we seem to have multiple systems in place that identify when others pose each of these risks and motivate appropriate self-protective behaviors (Miller & Maner, 2012; Murray et al., 2006). However, these systems are not impervious to other influences; we know from experience that we can too readily forgive a badly-behaving spouse or linger over coffee with a sneezing and coughing best friend.

Prior research examining these risk-control systems has almost exclusively focused on situations where either the motivation to avoid infection or avoid rejection is dominant. Indeed, experimental research invariably primes either infection or rejection risk, implicitly assuming that people only need to manage one of these risks at a time (Mortensen et al., 2010; Sacco et al., 2014). Nevertheless, in many settings, especially in the age of the COVID-19 pandemic, social interactions— whether with a neighbor, friend, family, team, or strangers – simultaneously present the risk of rejection and infection. Recognizing this reality, the present research is the first to examine whether the systems that regulate infection and rejection risk can work in tandem. Across 4 daily diary studies, we test the hypothesis that the social pain people experience when they are rejected by others can motivate them to take extra steps to protect themselves against the daily physical risk of being infected by COVID-19.

Regulating Infection Risk

People are equipped with *behavioral-immune (BI)* systems that help protect them against the risk of being physically infected by others (Murray & Schaller, 2006). The *BI* system links cues to infection risk to the behavioral impulse to be vigilant and avoidant of others (Miller &

Maner, 2012; Mortensen et al., 2010; Navarrete & Fessler, 2006; Sacco et al., 2014; Sawada et al., 2018; Tybur & Lieberman, 2016). For instance, participants primed with images of infectious disease are more likely to pull away from human faces (Mortensen et al., 2010), forego desirable opportunities for romantic connections (Sawada et al., 2018), and distrust outgroups (Navarrete & Fessler, 2006), as compared to control participants.

However, the *BI* system is prone to error. First, its activation relies on the alert supplied by experiencing disgust or detecting visible disease cues (Miller & Maner, 2012). This could make the *BI* system an insufficient line of defense against contagious diseases that cannot always be visually detected. For instance, COVID-19 is often transmitted by people showing no visible signs of disease, making it difficult to decide who to avoid in most social interactions (Bai et al., 2020). Group membership cannot be readily used as a heuristic to identify whom to avoid either, as with H.I.V. and Ebola (Ji et al., 2019; Kim et al., 2016; Oaten et al., 2009; O'Shea et al., 2020). Second, competing motivations can also suppress or override the *BI* system (Bressan, 2020; Olivera-La Rosa et al., 2020; Tybur et al. 2020). For instance, people eagerly seek physical contact with close intimates despite the higher risk of contracting viruses such as COVID-19 from them (Qian et al., 2020). People who are less sensitive to disgust (Aaroe et al., 2016; Kupfer & Tybur, 2017) or perceive themselves to have highly effective biological immune systems (Clay et al., 2012) also discount the infection risks others pose (Neuberg et al., 2011). For example, experimentally priming disease repels people who perceive themselves to be highly susceptible to contagious diseases from approaching human faces, but it has no such effect on people who feel *less* susceptible (Mortensen et al., 2010).

Reinforcing the BI System with the Risk of Social Pain

Social pain is the pain experienced in response to feeling hurt by another person due to

interpersonal rejection or loss (MacDonald & Jensen-Campbell, 2011; MacDonald & Leary, 2005). Social pain has hypothesized ties to physical pain (Dewall et al., 2010; Eisenberger, 2015; MacDonald & Leary, 2005), a common symptom of infection (Chiu, 2018). Indeed, social pain appears to rely on some of the same neural mechanisms as physical pain (Eisenberger, 2015). Given the potential overlap of these systems, we suggest that social pain may reinforce the *BI* system to motivate people to protect themselves against infectious disease threats.

Everyday experiences like being criticized by a spouse, ignored by a friend, or chastised by a coworker are thought to elicit social pain and hurt feelings as a means of (1) alerting people to the risks that others pose to them and (2) motivating them to protect themselves against the further possibility of interpersonal harm (Cavallo et al., 2009; Leary et al., 1995; Leary & Baumeister, 2000; Leary & Gabriel, 2021; MacDonald & Leary, 2005; Murray et al., 2006). Sensibly, people who have just been hurt vigilantly avoid exposing themselves to further social risk. For instance, people who have just been hurt protect themselves against being rejected again by being quicker to detect another's accepting smile (DeWall et al., 2009), seeking new friends (Maner et al., 2007), ingratiating themselves to strangers (Williams et al., 2000), and pushing away demonstrably untrustworthy intimates (Murray et al., 2003).

Importantly, people who have just been socially hurt also become generally risk-averse, which could give social pain the power to reinforce the *BI* system. Specifically, social pain activates domain-general motivations to protect against possible harm to the self. For example, people primed with the painful thought of their romantic relationship ending identified avoidance words more quickly than approach words in a lexical decision task; they also solved more anagrams when instructed to avoid failing, suggesting that social pain preoccupies people with avoiding potentially harmful experiences rather generally (Cavallo et al., 2010).

The Present Research

Building on these two strands of research, we hypothesized that the acute experience of social pain would motivate people to protect themselves against infectious disease threats they would otherwise discount. We conducted four daily diary studies involving 2794 participants (22,559 potential observations) across two countries (the U.S. and U.K.) during the first year of the COVID-19 pandemic. These studies shared overlapping measures and thus allow replicated tests of the hypothesis that social pain motivates people who normally feel invulnerable to infectious diseases to protect themselves against the daily risk of contracting COVID-19.

We measured three predictor variables in each study: (1) individual differences in *self-perceived vulnerability to contracting infectious disease* in general (Duncan et al., 2009), (2) *daily social pain*, captured through daily feelings of being more (vs. less) hurt/rejected by known others (MacDonald & Jensen-Campbell, 2011), and (3) *daily disease threat*, captured by personal concerns about the disease risk posed by COVID-19. We indexed the daily criterion variable – *self-protective behavior* – through (1) daily engagement in behaviors, such as mask-wearing, that public health officials recommended as the best means of physically protecting oneself and others (Eikenberry et al., 2020; Lyu & Wehby, 2021; Wilder-Smith & Freedman, 2019) and (2) daily restriction of social and work behaviors due to health worries.

As we noted earlier, people who generally believe they have highly effective physiological immune systems (i.e., those feel *less* vulnerable to infectious disease) often fail to protect themselves against infectious disease threats. Therefore, we hypothesized that when people *low* in self-perceived vulnerability to disease (“lows”) were *not* in acute social pain, they would discount the alerts sent by the *BI* system. That is, on days when lows felt *less* hurt and rejected than usual, their greater concern about COVID-19 that same day would *not* motivate

them to behave more self-protectively the next day. However, we hypothesized that when people *low* in disease vulnerability were in *social pain*, they would attend to their *BI* systems. That is, on day when lows felt *more* hurt and rejected than usual, their greater concern about COVID-19 that same day would motivate them to behave *more* self-protectively the next day.

In contrast, people who believe they have less effective physiological immune systems (i.e., those people who feel *more* vulnerable to infectious disease) are hypervigilant to disease. Therefore, their behavioral immune systems should *not* need to be sensitized by social pain. Consequently, we hypothesized that greater daily concern about COVID-19 would motivate people *high* in self-perceived vulnerability to disease (“highs”) to engage in *more* self-protective behavior the next day regardless of their daily experience of social pain (Shook et al., 2020).

Method

This research was approved by the (blinded) Institutional Review Board. We based the sample sizes of the funded studies on Monte Carlo power simulations to detect at least 2-way cross-level interactions (Mathieu et al. 2012), using input parameters derived from tests of related questions in our prior diary research. These simulations suggested power to detect 2-way interactions should approximate .90.¹ We discuss the four studies in parallel and procedures and measures not relevant to the current investigation in the SOM. The measures

¹ The current hypotheses include both 2-way and 3-way cross-level interactions (in particular, we expect the 3-way to consist of one non-significant 2-way contrasted with a significant 2-way), so the power to find a significant 2-way is highly related to the power of the hypothesized 3-way. However, specific power analyses for a 3-way cross-level interaction are not yet developed.

were identical across studies unless noted. Although the studies were not pre-registered, the data are available on OSF (https://osf.io/sfa25/?view_only=2c5dd8728f444b3cb9032d1d953526a2). Data from Studies 1-4 were included in one submitted manuscript and data from Study 4 was included in one prior publication testing unrelated hypotheses (see SOM).

Participants

Study 1. Using the online platform Prolific Academic, we recruited 500 paid participants (250 U.S.; 250 U.K.) for a 10-day study, expecting 350 to complete 8/10 assessments. Participants had to be in monogamous, heterosexual live-in romantic relationships, U.S. or U.K. residents, native English speakers, and pass a research integrity check. Ultimately, 478 participants finished 9/10 assessments on average; 76% completed all 10. Participants (164 men) averaged 36.3 years in age ($SD=11.5$); relationships averaged 11.0 ($SD=10.4$) years in length (152 dating, 44 engaged, 281 married); 255 had 1.9 children ($SD=0.9$). Of the 344 employed participants, 36% were essential (prioritized to work in person). U.S. participants lived across 41 states, with most from Florida (9%), Illinois (6.4%), New York (7.3%), North Carolina (5.6%), Ohio (6.4%), and Texas (6.4%); U.K. participants resided in England (87.3%), Scotland (7.8%), Wales (3.3%), and Northern Ireland (1.6%). Participants provided daily reports April 6-15, 2020.²

Study 2. Using the online platform Research Match, we solicited 1884 participants to attempt the first assessment of an 8-day study (for a chance to win 1/100 \$10 Amazon gift cards). To be eligible, participants had to be U.S. residents, native English speakers, and pass a research

² We required participants in Studies 1 and 4 to be involved in ongoing romantic relationships to test hypotheses about unexpected romantic partner behavior unrelated to the current research.

integrity check. We oversampled expecting greater attrition and missing data in a volunteer sample and decided a-priori to drop any participant who completed only the first, background assessment, leaving a total sample of 1546. These participants finished 5.7/7 of the remaining daily assessments on average; 51% completed all 7. They (275 men) averaged 45.3 years in age ($SD=17.1$); 469 were single and 1049 were in romantic relationships averaging 15.0 ($SD=14.9$) years in length (56 casually dating, 292 exclusively dating, 57 engaged, 644 married); 673 participants had 2.2 children ($SD=1.1$). Of the 904 employed participants, 37% were essential workers. Participants lived across 49 states, with the largest subsets in Oklahoma (9.8%), North Carolina (9%) and California (5%), and provided daily reports between April and May, 2020.

Study 3. We recruited 215 Psychology 101 undergraduate at the University at Buffalo for a 10-day study for course credit in April-May, 2020. We enrolled as many participants as we could before the semester ended. Participants had to pass a research integrity check. Participants finished 5/9 daily assessments on average; 18% completed all 9. Participants (120 men) averaged 19.1 years in age ($SD=1.6$); 135 participants were single and 80 were in romantic relationships averaging 1.3 ($SD=1.4$) years in length (22 casually dating, 57 exclusively dating, 1 engaged).

Study 4. We contracted the survey software and participant recruitment company Qualtrics to recruit 400 participants, which it exceeded given oversampling to guarantee the targeted sample size, soliciting 716 participants to attempt the first assessment. To be eligible, participants had to be U.S. citizens in monogamous, heterosexual live-in romantic relationships, native English speakers, and pass a research integrity check. Qualtrics did not recontact participants who only completed the first, background assessment, leaving 550 participants completing 9.6/11 assessments on average (with 348 completing all 11). Participants (268 men) averaged 42.6 years old ($SD=11.7$) and 363 had 2.1 children ($SD=1.1$). Relationships averaged

13.3 ($SD=10.2$) years in length (130 dating, 36 engaged, 389 married). Of the 392 employed participants, 25.3% were classified as essential workers. Participants lived across 41 states, with most from California (15.3%), North Carolina (11.9%), Indiana (10.5%), Vermont (5.9%), and Hawaii (5.4%). Participants were recruited in two 3-week cohorts in May and June, 2020.

Procedure

Each study was conducted online (see SOM). On the first assessment day, participants completed background surveys containing demographic and personality measures assessed once, including perceived vulnerability to infectious disease. In Studies 1-3, subsequent daily surveys were emailed to participants at 6 PM local time for the next 9 consecutive days in Studies 1 and 3 and 7 consecutive days in Study 2. Participants had until 6 AM local time the next morning to complete the survey. In Study 4, subsequent daily surveys were emailed to participants at 5 PM local time every other day for the next 3 weeks, resulting in 10 bidaily assessments. Participants had until a specified (local) time the next morning (6-7 A.M.) to complete the survey. Studies 1-3 were nonexperimental; Study 4 participants were randomly assigned to one of two experimental conditions (see SOM) that did not significantly moderate the effects.

Measures

Perceived vulnerability to infectious disease. Participants completed only the 6-item perceived vulnerability to infectious disease subscale of the Duncan et al. (2009) perceived vulnerability to disease scale (e.g., “In general, I am very susceptible to colds, flu, and other infectious diseases”, “If an illness is going around, I will get it”, “My immune system protects me from diseases most other people get”, reversed, 1=*strongly disagree*, 6=*strongly agree*).

Daily social pain. Participants reported on their daily experience of social pain by responding to the question, “Overall, how hurt or rejected did people you know make you feel

today?”, 0=*not at all*, 6=*a lot*. Higher scores corresponded to greater social pain.³

Daily concerns about COVID-19. In Studies 1-3, participants rated their concern about “the spread of illness” and “COVID-19/Coronavirus” each day, 0 = *not at all concerned*, 4 = *extremely concerned*; we averaged these two items to index daily concern about the disease threat posed by COVID-19. In Study 4, participants only rated their concern about “COVID-19/Coronavirus” each day, 0=*not at all concerned*, 4=*extremely concerned*.

Daily public-health recommended behavior. Each day participants rated how much effort/energy they spent engaging in 6 behaviors: “washing my hands for at least 20 seconds”, “using hand sanitizer”, “keeping physical distance (at least 6 feet/2 meters) between myself and another person when in public”, “covering my coughs/sneezes”, “trying not to touch my face” and “wearing a face mask”. In Studies 1-3, the response scale ranged from, 0=*no effort/energy at all*, 4=*an extreme amount of effort/energy*; in Study 4, it ranged from 0=*not at all*, 7=*a lot*.

Daily health worries restricting normal activities. Each day participants rated how much time worries about their health (1) interfered with social activities and (2) made it difficult to perform work or other regular daily activities, 0=*none of the time*, 4=*all of the time*.

Daily physical pain. Each day participants rated their level of physical pain, 0=*no pain at all*, 10=*pain as bad as you can imagine*,

https://www.physiopedia.com/Numeric_Pain_Rating_Scale.

³ We utilized daily ratings of experienced social pain (rather than reports of specific rejection experiences, e.g., “Someone close to me criticized or insulted me”) because individuals differ in their tendency to experience social pain in response to such events (Leary & Baumeister, 2000; Murray et al., 2006).

Daily concern about counting on other people. Each day participants rated their concern about (1) “people being selfish” and (2) “people not looking out for one another”, 0=*not at all concerned*, 4=*extremely concerned*.

Results

Table 1 contains the descriptive information for each measure in each study, including internal consistencies. Our hypotheses imply 3-way cross-level interactions between individual differences in vulnerability to disease threat, daily social pain, and daily concern about COVID-19 in predicting each of the two measures of self-protective behavior. We modeled the data as a two-level nested structure using the multilevel modeling program MLwiN (Goldstein et al., 1998) with time of assessment at Level 1 (within) and participant at Level 2 (between).

Table 1. Descriptive information about the measures in Studies 1-4

<i>Predictor</i>	<i>Study 1</i> <i>(Prolific Academic)</i>		<i>Study 2</i> <i>(Research Match)</i>		<i>Study 3</i> <i>(Undergrads)</i>		<i>Study 4</i> <i>(Qualtrics Sample)</i>	
	<i>Mean (SD)</i>	<i>a</i>	<i>Mean (SD)</i>	<i>a</i>	<i>Mean (SD)</i>	<i>a</i>	<i>Mean (SD)</i>	<i>a</i>
Disease vulnerability	3.03 (1.05)	.89	2.77 (1.18)	.91	2.77 (0.90)	.79	2.51 (1.06)	.87
Daily COVID-19 concern	2.63 (1.16)	.90	2.29 (1.17)	.91	2.45 (1.18)	.86	2.48 (1.25)	-
Daily social pain	0.79 (1.44)	-	0.69 (1.29)	-	1.26 (1.64)	-	0.91 (1.54)	-
Daily public-health-recommended behavior	1.66 (1.08)	.86	1.54 (1.06)	.86	2.38 (1.15)	.90	4.05 (2.12)	.88
Daily health worries	0.64 (0.97)	.82	0.56 (0.92)	.76	0.96 (1.14)	.84	0.80 (1.07)	.89
restricting behavior								
Daily physical pain	1.40 (2.16)	-	1.78 (2.24)	-	1.38 (2.27)	-	1.94 (2.54)	-
Daily concerns about other people	1.67 (1.19)	.86	1.63 (1.18)	.87	1.70 (1.19)	.85	2.20 (1.22)	.88

We used the over-time nature of the data to separate cause and effect in the analyses. Specifically, we predicted the current day's self-protective behavior from the *main* effects of (1) the prior day's social pain (i.e., feeling hurt/rejected), a lagged within-person variable centered on the person's daily mean, (2) the prior day's concern about COVID-19, a lagged within-person variable centered on the person's daily mean, (3) self-perceived vulnerability to infectious disease, a between-person variable centered on the sample mean, and (4) their 2-way and 3-way interactions. We modeled the focal within-person main effects as random.⁴

As control variables, we also included the (1) value of the outcome variable on the prior day to control for the autoregressive effects of time, (2) linear effect of time to control for the effects of collectively shared events on a given day or maturational changes in participants, and (3) main effects of participants' mean daily social pain and mean daily concern about COVID-19 (both between-person variables), their 2-way interaction, and their further interactions with self-perceived invulnerability to infectious disease to ensure that the hypothesized daily-level effects were not confounded with between-person effects (Bolger & Laurenceau, 2013).

Supplementary Tables 1-4 contain the results for Studies 1-4, respectively. Some null and reversed effects are expected even in the presence of true effects (Lakens & Etzs, 2017; Stanley

⁴ We fit random coefficient models to intercepts and focal independent variables, following recommendations supporting the use of maximally random models (Barr et al., 2013). However, in complex models with multiple predictors, specifying multiple random effects can result in models failing to converge, making fixed specification appropriate on a case-by-case basis (Bates et al., unpublished on-line manuscript).

& Spence, 2014). Therefore, we report only the meta-analytic effects across studies in the main text to focus interpretation on those effects that proved robust and replicable (Braver et al., 2014; Chan & Arvey, 2012; Fabrigar & Wegener, 2016; Goh et al., 2016; Stroebe, 2016). Table 2 presents the meta-analytic results for each measure of daily self-protective behavior, listing the average effect size, r , 95% confidence intervals, and z -values for each term in the multilevel models (Hedges & Vevea, 1998, see SOM). Figures 1 to 4 illustrate the effects for daily public-health-recommended behavior in each study, with the figures for the largest N studies (2 and 4) best capturing the meta-analytic 3-way interactions we detail next. (We operationalized high/low values as 1 SD above and below the appropriate mean).

Table 2. Meta-analytic summary predicting today's self-protective behavior from the prior day's COVID-19 concern, the prior day's social pain, and infectious disease susceptibility.

Predicting daily public-health recommended behavior. The predicted 3-way interaction was meta-analytically significant, $r = -.069$, 95%CI $(-.106, -.032)$, $z = -3.66$, $p = .000256$. We decomposed the 3-ways to reveal the 2-way prior day's social pain by COVID-19 concern interaction for people *low* versus *high* on self-perceived vulnerability to infectious disease.

As expected, for people *high* in self-perceived vulnerability to infectious disease, the meta-analytic 2-way between the prior day's social pain and COVID-19 concern predicting the next day's engagement in the recommended self-protective behaviors was *not* significant, $r = -.031$, 95%CI $(-.068, .007)$, $z = -1.62$, $p = .105$. Also as expected, the meta-analytic simple effect of the prior day's concerns about COVID-19 on the next day's engagement in the recommended behaviors was significantly positive, $r = .041$, 95%CI $(.003, .078)$, $z = 2.138$, $p = .032$. Thus, people who chronically felt *highly* vulnerable to infectious disease put more energy/effort into the recommended self-protective behaviors on days after they were *more* personally concerned about COVID-19, as compared to days they felt *less* concerned.

In contrast, for people *low* in self-perceived vulnerability to infectious disease (i.e., lows), the meta-analytic 2-way interaction between the prior day's social pain and COVID-19 concern predicting the next day's engagement in self-protective behavior was significant, as expected, $r = .069$, 95%CI $(.032, .106)$, $z = 3.66$, $p = .000252$. We decomposed this conditional 2-way to reveal the effects of the prior day's concern about COVID-19 on the next day's self-protective behavior when *lows* had been in greater (vs. less) than usual social pain on the prior day.

As expected, when people *low* in self-perceived vulnerability to disease were *not* in social pain on the prior day (i.e., feeling *less* hurt/rejected than usual), they did not attend to their *BI* systems. Their greater concerns about COVID-19 that day did *not* motivate them to engage in more public-health recommended behaviors the next day. This meta-analytic simple effect of the

prior day's COVID-19 concerns was not significant, $r=-.006$, 95%CI (-.043, .031), $z=-0.32$, $p=.747$. However, when people *low* in vulnerability to disease were in *acute* social pain on the prior day (i.e., feeling *more* hurt/rejected than usual), they heeded the impulses supplied by their behavioral-immune systems. Their greater concerns about COVID-19 that day motivated them to put *more* energy into engaging in public-health recommended self-protective behavior the next day, as compared to days they were *less* personally concerned. This meta-analytic simple effect of the prior day's COVID-19 concerns was significantly positive, $r=.058$, 95%CI (.020, .095), $z=3.04$, $p=.00240$.

Predicting daily health worries restricting activities. The predicted 3-way interaction was meta-analytically significant, $r=-.041$, 95%CI (-.078, -.004), $z=-2.18$, $p=.029366$. As expected, for people *high* in vulnerability to disease, the meta-analytic 2-way interaction between the prior day's experience of social pain and COVID-19 concern was not significant predicting today's restricted activities, $r=.007$, 95%CI (-.030, .045), $z=0.39$, $p=.70$. Unexpectedly, the meta-analytic effect of the prior day's concerns about COVID-19 on the next day's restricted behavior was not significant for highs either, $r=-.004$, 95%CI (-.041, .034), $z=-0.19$, $p=.851$.

However, for people *low* in self-perceived vulnerability to disease, the meta-analytic 2-way interaction between the prior day's social pain and COVID-19 concern predicting today's restricted activity was significant $r=.073$, 95%CI (.036, .110), $z=3.84$, $p=.0001$. When *lows* had *not* just been hurt or rejected by someone they knew, they again seemed insensitive to their *BI* systems. Indeed, when people low in vulnerability to disease were *not* in social pain, they actually tended to report health worries being *less* restrictive of their activities on days after they were *more* personally concerned about COVID-19, as compared to days they were *less* concerned, $r=-.033$, 95%CI (-.070, .005), $z=-1.72$, $p=.085$. However, when lows were in *acute*

social pain, they were significantly *more* likely to report worries about their health restricting their daily activities when they were *more* personally concerned about COVID-19, as compared to days they were *less* concerned, $r=.041$, $95\%CI (.004, .0783)$, $z=2.17$, $p=.030$.

Ruling in/out explanations. The findings thus far support the hypothesis that the experience of social pain can sensitize the behavioral-immune system for people who normally feel invulnerable to infectious disease. Nonetheless, we have yet to provide evidence as to why (or whether) the experience of social pain actually fulfills this sensitizing function.

First, the acute experiences of social and physical pain often co-occur (MacDonald & Leary, 1995). To examine whether the observed moderating effects of social pain instead captured the moderating effects of physical pain, we redid the analyses substituting the daily measure of physical pain for the daily measure of social pain. Supplementary Tables 5-8 contain the results. The 3-way prior day's physical pain by prior day's COVID-19 concern by self-perceived vulnerability to infectious disease interaction was *not* meta-analytically significant predicting daily effort/energy engaging in the public-health-recommended protective behavior, $r=.0156$, $95\%CI (-.022, .053)$, $z=0.82$, $p=.41$, or health worries restricting one's activities, $r=.007$, $95\%CI (-.030, .044)$, $z=0.36$, $p=.72$. The obtained meta-analytic 3-way interactions involving social pain were also still significant when we added daily physical pain to the models (see SOM). Social pain thus plays a unique moderating role.

Second, we reasoned that feeling acutely hurt/rejected by known others alerts people who normally feel invulnerable to infectious disease to the dangers that depending on other people can present. To see if acute social pain had this alerting effect, we predicted daily concerns about depending on other people from the independent and control variables included in the primary multilevel models. Supplementary Tables 9-12 contain the results. They revealed a meta-

analytically significant 2-way prior day's social pain by self-perceived vulnerability to infectious disease interaction across studies (not qualified by daily COVID-19 concerns), $r = -.057$, 95%CI $(-.094, -.020)$, $z = -3.01$, $p = .002605$. For people *high* in self-perceived vulnerability to infectious disease, the prior day's social pain had no significant effect on the next days' concerns about others, $r = -.020$, 95%CI $(-.057, .018)$, $z = -1.03$, $p = .305$. However, for people *low* in vulnerability to disease, the acute experience of social pain alerted them to the danger others posed. They reported significantly greater concerns about depending on other people in general the day after they experienced greater-than-usual social pain, as compared to days they experienced less-than-usual social pain, $r = .054$, 95%CI $(.017, .091)$, $z = 2.85$, $p = .004406$.

Discussion

Social pain appears to sensitize the behavioral-immune system, motivating people to self-protect against contagious disease threats they might be otherwise inclined to ignore. As expected, feeling hurt or rejected was not needed to sensitize the behavioral immune systems of people already *high* in self-perceived vulnerability to infectious disease. Their daily self-protective behavior was positively calibrated to their concerns about COVID-19, consistent with their general tendency to be suspicious of the threat that others could pose to them.

However, people who felt relatively *invulnerable* to infectious disease are generally more willing to trust others, even strangers (Aaroe et al., 2016; Kupfer & Tybur, 2017). This general disposition to *not* be threatened by others might explain why people who are low in self-perceived vulnerability to disgust and disease often approach rather than avoid others in the face of disease threat. Indeed, in the present studies, when people who normally felt invulnerable to infectious disease had *not* just been hurt or rejected, their greater daily concerns about COVID-19 did not motivate them to engage in more self-protective behavior.

But, the acute experience of social pain appears to jolt the self-perceived invulnerable out of such complacency. People who normally felt *less* vulnerable to infectious disease reported significantly *greater* concerns about depending on others the day after they had just felt especially hurt/rejected by someone they knew, as compared to days they felt less hurt. Moreover, when people who normally felt *less* vulnerable to infectious disease experienced *acute* social pain, they attended to their behavioral-immune systems. They devoted significantly *more* effort to self-protective behaviors the day after they reported being *more* personally concerned about the disease threat posed by COVID-19.

The present findings have strengths and limitations. On the plus side, the effects were robust across four daily diary studies utilizing large *Ns*, overlapping measures, and multiple assessments. The cross-day/lagged analyses also separated hypothesized causes from effects. Furthermore, the predicted moderation effects were specific to social and not physical pain. Admittedly, the effects were small, although that is expected given the multiplicity of factors likely to control self-protective behavior (Götz et al., 2021). On the negative side, the predicted effects were not significant across every dependent variable in every study, which can happen in the presence of a true effect (Lakens & Ets, 2017; Stanley & Spence, 2014). Nonetheless, the 3-way and conditional 2-way interactions and simple effects of disease threat were meta-analytically robust, with one exception. Although people *high* in self-perceived vulnerability to disease were significantly more likely to engage in public-health-recommended self-protective behaviors on days after they reported *more* (vs. less) serious COVID-19 concerns, they were *not* more likely to report that health worries also restricted their activities. This might reflect a natural ceiling effect given that highs restricted more activities across days (relative to lows).

The present findings make an important theoretical advance by providing the first evidence that social pain can sensitize the behavioral-immune system. Future research might examine whether social pain similarly motivates people who normally feel *invulnerable* to disease to engage in other forms of self-protection, such as outgroup avoidance. But, beyond this theoretical advance, the findings may have important practical implications. For instance, people are often unwilling to get preventative vaccinations because they feel personally invulnerable to disease. Reminding people of common everyday experiences being hurt by others might help nudge the complacent to get vaccinated against COVID-19 or other infectious diseases by reminding them they cannot always count on others to protect them.

Conclusion

Social pain hurts in order to motivate people to take action to make social connection safer and less interpersonally risky. The present findings suggest that the acute experience of social pain motivates those who normally see little reason to self-protect against infectious disease to take the needed steps to protect themselves, and others, from physical harm.

2. Supplementary Procedural Information

Studies 1-3. Studies 1 through 3 utilized near exact measures, with the exception of some items (not utilized in the present research) that were specific to the U.K. sample in Study 1 (the Prolific Academic sample). In each of these 3 studies, the first of the daily surveys included background personality and relationship quality measures that were not central to the current research (e.g., self-esteem, attachment style, trust in the romantic partner, romantic relationship satisfaction, a 10-item personality questionnaire, need for closure, religiosity, and xenophobia). In addition to the items reported in the main text, the subsequent daily surveys included daily/state measures of threatening current events, daily trust in various government agents and agencies, unexpected romantic partner/child behavior, mood, positive and negative intimate relationship experiences, prosocial concerns and behavior, parasocial relationship activities, relationship quality, and worry about the health of friends, family, and strangers.

Study 4. On the first assessment day, participants first completed a demographics survey, which including items assessing sex, age, SES, ethnicity, income, relationship status and relationship satisfaction. Participants then completed the Partner Evaluative Priming Task (PEPT), an implicit task McNulty and colleagues developed to capture gut-level, automatic feelings toward one's partner (Hicks et al. 2021). Next participants completed a survey containing individual difference measures, including self-esteem, stress, the 10-item personality measure, attachment, need for closure, disease sensitivity, trust in other people, religiosity, xenophobia, belief in conspiracy theories, concern about COVID-19, and romantic relationship evaluations including trust and commitment. Finally, participants randomly assigned to the experimental condition then underwent an evaluative conditioning procedure designed to create more positive automatic attitudes toward their romantic partner. As detailed in McNulty et al.

(2017), this 6-7 minute evaluative conditioning protocol involved viewing 225 trials involving 310 stimuli that included 25 critical pairings of their partner (i.e., their partner’s first name or role) with positive unconditioned stimuli, such as pictures of puppies or sunsets or words like “wonderful” and “fabulous”). Participants randomly assigned to the control condition underwent a parallel, but neutral, conditioning procedure that I included 25 pairings of their partner (i.e., their partner’s first name or role) with neutral unconditioned stimuli, such as pictures of electric outlets, lightbulbs, or sidewalks or words like “while”, “about”, or “therefore”.

In assessments 2, 3, 4, 5, 7, 8, 9, and 10, participants first underwent the condition-specific evaluative conditioning protocol and then completed the self-report surveys assessing the focal dependent measures among unrelated measures. Then they completed a self-report survey that included the measures reported in the main text as well as state measures of nonsensical or threatening current events, unexpected romantic partner/child behavior, positive and negative relationship behaviors, prosocial behavior, conflict inside and outside the home, satisfaction in romantic, friend, and parent-child relationships, social inclusion, mood, pain, concern about illness in oneself, friends, family, and strangers, and self-protective behavior. In assessment 6, participants first completed the PEPT and then completed the evaluative conditioning protocol and self-report surveys. In the last (11th) assessment, participants only completed the PEPT and the self-report survey.

McNulty, J. K., Olson, M. A., Jones, R. E., & Acosta, L. M. (2017). Automatic associations between one’s partner and one’s affect as the proximal mechanism of change in relationship satisfaction: Evidence from evaluative conditioning. *Psychological Science*, 28, 1031-1040.

3. Prior Use of Study 4 Data

Data from Studies 1-4 were utilized in one submitted manuscript. This manuscript used the measure of daily concerns about COVID-19 to predict daily trust in significant others, daily trust in government caregivers, and daily trust in strangers from daily concerns about COVID-19 to test unrelated hypotheses. This manuscript did not examine daily self-protective behavior, nor did it examine the moderating influence of daily hurt feelings or self-perceived vulnerability to disease in predicting the outcomes. This submitted manuscript revealed that people report greater trust in significant others and greater trust in government caregivers when they are more personally concerned about COVID-19. Data from Study 4 were reported in one published study testing unrelated hypotheses (blind citation). This paper predicted daily evaluations of family relationship quality (a composite of daily ratings of romantic relationship quality [*terrible* to *terrific*], parent-child relationship quality [*terrible* to *terrific*], hurtful behavior within the family, and conflict within the home) from the main and interactive effects of national sentiment toward President Trump on the assessment day (indexed through the percent of national social media posts that were negative), the cumulative number of COVID-19 cases in the United States on the assessment day, and political orientation (i.e., *extremely liberal* to *extremely conservative*). The paper revealed that on days when national sentiment toward President Trump was *inconsistent* with one's own view of political reality, greater than normal increases in the number of COVID-19 cases motivated people to find greater happiness in their family relationships.

4. Information about the meta-analysis

Following Hedges & Vevea (1998), the following formulae were utilized to calculate the meta-analytic effects.

1
2
3 convert z to r : $\text{SQRT}(z^2 / (z^2 + N))$
4
5 convert r to Z_r (Fisher's Z): $0.5 * (\text{LN}((1 + r)/(1 - r)))$
6
7 calculate mean Z_r over multiple studies (i represents the study number): $\text{sum}(Z_{ri} * (N_i - 3)) / \text{sum}$
8
9 $(N_i - 3)$
10
11
12 SE for mean Z_r : $\text{SQRT}(1 / (\text{sum}(N_i - 3)))$
13
14 meta-analysis $z = \text{mean } Z_r / SE \text{ mean } Z_r$
15
16
17 CI s and p values based on z statistic distribution

6. Results of meta-analysis predicting self-protective behavior in Studies 1-4 from the simultaneous effects of physical and social pain.

We also conducted a further set of analyses that examined whether obtained meta-analytic 3-way prior day's concerns about COVID-19 by the prior day's hurt feelings by self-perceived vulnerability to disease was still significant predicting each measure of self-protective behavior when we controlled for the main and moderating effects of daily physical pain (i.e., the main effect of the prior day's physical pain and its interactions with the prior day's social pain and self-perceived susceptibility to infectious disease). The reported meta-analytic 3-way interaction involving social pain was still significant predicting effort/energy spent engaging in public-health-recommended behaviors, $r=-.072$, $z=-3.81$, $p=.00014$, $95\%CI(-.109, -.035)$, and health concerns restricting one's activities, $r=-.047$, $z=-2.50$, $p=.012295$, $95\%CI(-.044, -.010)$. However, the meta-analytic 3-way involving physical pain was not significant predicting effort/energy spent engaging in public-health-recommended behaviors, $r=.025$, $z=1.30$, $p=.192$, $95\%CI(-.012, .062)$, or health concerns restricting one's activities, $r=.011$, $z=0.57$, $p=.566$, $95\%CI(-.026, .048)$.

Supplementary Table 9. Predicting today’s concerns about other people from the prior day’s COVID-19 concern, the prior day’s social pain, and infectious disease susceptibility in Study 1 (Prolific Academic Sample).

<i>Predictor</i>	<i>Daily Concerns about Other People</i>

integrity We care about the quality of our data. In order for us to get the most accurate measures of your opinions, it is important that you thoughtfully provide your best answers to each question in this survey.

Do you commit to thoughtfully provide your best answers to each question in this survey?

- ☐ I will give my best answers throughout the study. (1)
- ☐ I can't promise either way. (2)
- ☐ I won't give my best answers. (3)

End of Block: Screening

Start of Block: Instructions

Instruction

Thank you for agreeing to participate in our study!

This is Day 1 of your 10 Daily Surveys.

Today's survey should take approximately 20-30 minutes to complete.

The surveys you will receive starting tomorrow should take approximately 10-15 minutes to complete.

We ask that you complete each survey before you go to bed at night so that you can reflect on the day's events. Please note that your survey will only be accessible until 6:00 a.m. (EST) tomorrow morning.

Please be sure to submit the last page of the survey to ensure that your response is recorded so that you can receive full payment at the end of the study.

If you have any questions, please do not hesitate to contact XXXXXX.

End of Block: Instructions

Start of Block: Demographic Measures

state What STATE do you live in?

▼ Alabama (1) ... Wyoming (50)

county What COUNTY do you live in within your state (e.g., Erie County, New York)?

Zipcode What's the zip code for your current address (where you are right now)?

Note: This information is for research purposes only, is confidential, and will not be shared.

Start of Block: TIPI

TIP1_Ins Here are a number of personality traits that may or may not apply to you. Please choose a number on the provided scales to indicate the extent to which you agree or disagree with that statement. You should rate the extent to which the pair of traits applies to you, even if one characteristic applies more strongly than the other.

TIP11 I see myself as: extraverted, enthusiastic.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI2 I see myself as: critical, quarrelsome.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI3 I see myself as: dependable, self-disciplined.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI4 I see myself as: anxious, easily upset.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI5 I see myself as: open to new experiences, complex.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI6 I see myself as: reserved, quiet.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI7 I see myself as: sympathetic, warm.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI8 I see myself as: disorganized, careless.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI9 I see myself as: calm, emotionally stable.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI10 I see myself as: conventional, uncreative.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

End of Block: TIPI

Start of Block: MAQ

MAQ_Ins

Please respond to each of the following statements by expressing how much you agree with it (if you do generally agree) or how much you disagree with it (if you generally disagree).

Please be as accurate as you can throughout, and try especially hard not to let your answer to any one item influence your answer to any other item. Treat each item as though it is completely unrelated to the others.

There are no right or wrong answers; you are simply to express your own personal feelings and opinions. Choose from these response options:

MAQ1 When I'm close to someone, it gives me a sense of comfort about life in general.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ2 I often worry that my partner doesn't really love me.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ3 I have trouble getting others to be as close as I want them to be.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ4 I find it easy to be close to others.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ5 I often worry my partner will not want to stay with me.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ6 Others want me to be more intimate than I feel comfortable being.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ7 It feels relaxing and good to be close to someone.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ8 I am very comfortable being close to others.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ9 I don't worry about others abandoning me.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ10 My desire to merge sometimes scares people away.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ11 I prefer not to be too close to others.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ12 I find that others are reluctant to get as close as I would like.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ13 I get uncomfortable when someone wants to be very close.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ14 Being close to someone gives me a source of strength for other activities.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

End of Block: MAQ

Start of Block: Trust

Trust1 Generally speaking, would you say that most people can be trusted or that you can't be too careful in dealing with people?

- ☐ Most people can be trusted (1)
- ☐ Can't be too careful. (2)

Trust2 Would you say that most of the time, people try to be helpful, or that they are mostly just looking out for themselves?

- ☐ Try to be helpful (1)
- ☐ Looking out for themselves (2)

Trust3 Do you think that most people would try to take advantage of you if they got the chance or would they try to be fair?

- ☐ Take advantage (1)
- ☐ Try to be fair (2)

End of Block: Trust

Start of Block: Ambivalence Tolerance

Ambi_Ins

Please indicate the extent to which you agree with the statements below using the scales provided.

Ambi1 I don't like situations that are uncertain.

- ☐ Strongly Disagree (1)
- ☐ Moderately Disagree (2)
- ☐ Slightly Disagree (3)
- ☐ Slightly Agree (4)
- ☐ Moderately Agree (5)
- ☐ Strongly Agree (6)

Ambi2 I find that a well-ordered life with regular hours suits my temperament.

- ☐ Strongly Disagree (1)
- ☐ Moderately Disagree (2)
- ☐ Slightly Disagree (3)
- ☐ Slightly Agree (4)
- ☐ Moderately Agree (5)
- ☐ Strongly Agree (6)

Ambi3 I don't like to go into a situation without knowing what I can expect from it.

- ☐ Strongly Disagree (1)
- ☐ Moderately Disagree (2)
- ☐ Slightly Disagree (3)
- ☐ Slightly Agree (4)
- ☐ Moderately Agree (5)
- ☐ Strongly Agree (6)

Ambi4 I find that establishing a consistent routine enables me to enjoy life more.

- ☐ Strongly Disagree (1)
 - ☐ Moderately Disagree (2)
 - ☐ Slightly Disagree (3)
 - ☐ Slightly Agree (4)
 - ☐ Moderately Agree (5)
 - ☐ Strongly Agree (6)
-

Ambi5 I enjoy having a clear and structured mode of life.

- ☐ Strongly Disagree (1)
 - ☐ Moderately Disagree (2)
 - ☐ Slightly Disagree (3)
 - ☐ Slightly Agree (4)
 - ☐ Moderately Agree (5)
 - ☐ Strongly Agree (6)
-

Ambi6 I dislike unpredictable situations.

- ☐ Strongly Disagree (1)
- ☐ Moderately Disagree (2)
- ☐ Slightly Disagree (3)
- ☐ Slightly Agree (4)
- ☐ Moderately Agree (5)
- ☐ Strongly Agree (6)

End of Block: Ambivalence Tolerance

Start of Block: Disease Vulnerability

DisV_Ins

Start of Block: Conspiracy Beliefs

Consp_Ins **There is often debate about whether or not the public is told the whole truth about various important issues. The following questions are designed to assess your beliefs about some of these subjects. Please indicate the degree to which you believe each statement is likely to be true using the scales provided.**

Consp1 The power held by heads of state is second to that of small, unknown groups who really control world politics.

- ☐ Definitely not true (-2)
- ☐ Probably not true (-1)
- ☐ Not sure / cannot decide (0)
- ☐ Probably true (1)
- ☐ Definitely true (2)
-

Consp2 A small, secret group of people is responsible for making all major world decisions, such as going to war.

- ☐ Definitely not true (-2)
- ☐ Probably not true (-1)
- ☐ Not sure / cannot decide (0)
- ☐ Probably true (1)
- ☐ Definitely true (2)

Consp3 Certain significant events have been the results of the activity of a small group who secretly manipulate world events.

- ☐ Definitely not true (-2)
- ☐ Probably not true (-1)
- ☐ Not sure / cannot decide (0)
- ☐ Probably true (1)
- ☐ Definitely true (2)

Consp4 The spread of certain viruses and/or diseases is the result of the deliberate, concealed efforts of some organization.

- ☐ Definitely not true (-2)
- ☐ Probably not true (-1)
- ☐ Not sure / cannot decide (0)
- ☐ Probably true (1)
- ☐ Definitely true (2)

Consp5 Technology with mind-control capacities is used on people without their consent.

- ☐ Definitely not true (-2)
- ☐ Probably not true (-1)
- ☐ Not sure / cannot decide (0)
- ☐ Probably true (1)
- ☐ Definitely true (2)

Consp6 Experiments involving new drugs or technologies are routinely carried out on the public without their knowledge or consent.

- ☐ Definitely not true (-2)
- ☐ Probably not true (-1)
- ☐ Not sure / cannot decide (0)
- ☐ Probably true (1)
- ☐ Definitely true (2)

Consp7 Groups of scientists manipulate, fabricate, or suppress evidence in order to deceive the public.

- ☐ Definitely not true (-2)
- ☐ Probably not true (-1)
- ☐ Not sure / cannot decide (0)
- ☐ Probably true (1)
- ☐ Definitely true (2)

Consp8 New and advanced technology which would harm current industry is being suppressed.

- ☐ Definitely not true (-2)
- ☐ Probably not true (-1)
- ☐ Not sure / cannot decide (0)
- ☐ Probably true (1)
- ☐ Definitely true (2)

Consp9 A lot of important information is deliberately concealed from the public out of self-interest.

- ☐ Definitely not true (-2)
- ☐ Probably not true (-1)
- ☐ Not sure / cannot decide (0)
- ☐ Probably true (1)
- ☐ Definitely true (2)

Instruction

Thank you for agreeing to participate in our study!

This is Day 1 of your 10 Daily Surveys.

Today's survey should take approximately 20-30 minutes to complete.

The surveys you will receive starting tomorrow should take approximately 10-15 minutes to complete.

We ask that you complete each survey before you go to bed at night so that you can reflect on the day's events. Please note that your survey will only be accessible until 6:00 a.m. (BST) tomorrow morning.

Please be sure to submit the last page of the survey to ensure that your response is recorded so that you can receive full payment at the end of the study.

If you have any questions, please do not hesitate to contact XXXXXXXX

Start of Block: TIPI

TIP1_Ins Here are a number of personality traits that may or may not apply to you. Please choose a number on the provided scales to indicate the extent to which you agree or disagree with that statement. You should rate the extent to which the pair of traits applies to you, even if one characteristic applies more strongly than the other.

TIP11 I see myself as: extraverted, enthusiastic.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI2 I see myself as: critical, quarrelsome.

- ☐ Disagree strongly (1)
 - ☐ Disagree moderately (2)
 - ☐ Disagree a little (3)
 - ☐ Neither agree nor disagree (4)
 - ☐ Agree a little (5)
 - ☐ Agree moderately (6)
 - ☐ Agree strongly (7)
-

TIPI3 I see myself as: dependable, self-disciplined.

- ☐ Disagree strongly (1)
 - ☐ Disagree moderately (2)
 - ☐ Disagree a little (3)
 - ☐ Neither agree nor disagree (4)
 - ☐ Agree a little (5)
 - ☐ Agree moderately (6)
 - ☐ Agree strongly (7)
-

TIPI4 I see myself as: anxious, easily upset.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI5 I see myself as: open to new experiences, complex.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

1.

TIPI6 I see myself as: reserved, quiet.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI7 I see myself as: sympathetic, warm.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI8 I see myself as: disorganised, careless.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI9 I see myself as: calm, emotionally stable.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

1.

TIPI10 I see myself as: conventional, uncreative.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

Start of Block: MAQ

MAQ_Ins

Please respond to each of the following statements by expressing how much you agree with it (if you do generally agree) or how much you disagree with it (if you generally disagree).

Please be as accurate as you can throughout, and try especially hard not to let your answer to any one item influence your answer to any other item. Treat each item as though it is completely unrelated to the others.

There are no right or wrong answers; you are simply to express your own personal feelings and opinions. Choose from these response options:

MAQ1 When I'm close to someone, it gives me a sense of comfort about life in general.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ2 I often worry that my partner doesn't really love me.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ3 I have trouble getting others to be as close as I want them to be.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

1.

MAQ4 I find it easy to be close to others.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ5 I often worry my partner will not want to stay with me.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ6 Others want me to be more intimate than I feel comfortable being.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ7 It feels relaxing and good to be close to someone.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ8 I am very comfortable being close to others.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ9 I don't worry about others abandoning me.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

1.

MAQ10 My desire to merge sometimes scares people away.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ11 I prefer not to be too close to others.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ12 I find that others are reluctant to get as close as I would like.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ13 I get uncomfortable when someone wants to be very close.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ14 Being close to someone gives me a source of strength for other activities.

- ☐ I **Disagree** with this statement a lot (1)
- ☐ I **Disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

End of Block: MAQ

Start of Block: Trust

Trust1 Generally speaking, would you say that most people can be trusted or that you can't be too careful in dealing with people?

- ☐ Most people can be trusted (1)
- ☐ Can't be too careful. (2)

1.

Trust2 Would you say that most of the time, people try to be helpful, or that they are mostly just looking out for themselves?

- ☐ Try to be helpful (1)
- ☐ Looking out for themselves (2)

Trust3 Do you think that most people would try to take advantage of you if they got the chance or would they try to be fair?

- ☐ Take advantage (1)
- ☐ Try to be fair (2)

End of Block: Trust

Start of Block: Ambivalence Tolerance

Ambi_Ins

Please indicate the extent to which you agree with the statements below using the scales provided.

Ambi1 I don't like situations that are uncertain.

- ☐ Strongly Disagree (1)

- ☐ 5 (5)
- ☐ 6 (6)
- ☐ 7 (7)
- ☐ 8 (8)
- ☐ 9 (9)
- ☐ A great deal10 (10)

Pain Please rate the level of your **physical pain** by selecting the one number that best describes how much pain you have been experiencing **TODAY**.

- ☐ No pain at all 0 (0)
- ☐ 1 (1)
- ☐ 2 (2)
- ☐ 3 (3)
- ☐ 4 (4)
- ☐ 5 (5)
- ☐ 6 (6)
- ☐ 7 (7)
- ☐ 8 (8)
- ☐ 9 (9)
- ☐ Pain as bad as you can imagine 10 (10)

End of Block: Perceived Health

Start of Block: Daily Efforts

DEff_Ins

How much effort/energy have you spent engaging in the following behaviors TODAY?

DEff1 Washing my hands for at least 20 seconds.

- ☐ 0No effort/energy at all (0)
- ☐ 1Light effort/energy (1)
- ☐ 2Some effort/energy (2)
- ☐ 3A lot of effort/energy (3)
- ☐ 4An extreme amount of effort/energy (4)

DEff2 Using hand sanitizer.

- ☐ 0No effort/energy at all (0)
- ☐ 1Light effort/energy (1)
- ☐ 2Some effort/energy (2)
- ☐ 3A lot of effort/energy (3)
- ☐ 4An extreme amount of effort/energy (4)

DEff3 Keeping physical distance (at least 6 feet) between myself and another person when in public.

- ☐ 0 No effort/energy at all (0)
- ☐ 1 Light effort/energy (1)
- ☐ 2 Some effort/energy (2)
- ☐ 3 A lot of effort/energy (3)
- ☐ 4 An extreme amount of effort/energy (4)

DEff4 Covering my coughs/sneezes.

- ☐ 0 No effort/energy at all (0)
- ☐ 1 Light effort/energy (1)
- ☐ 2 Some effort/energy (2)
- ☐ 3 A lot of effort/energy (3)
- ☐ 4 An extreme amount of effort/energy (4)

DEff5 Trying not to touch my face.

- ☐ 0 No effort/energy at all (0)
- ☐ 1 Light effort/energy (1)
- ☐ 2 Some effort/energy (2)
- ☐ 3 A lot of effort/energy (3)
- ☐ 4 An extreme amount of effort/energy (4)

DEff6 Wearing a face mask.

- ☐ 0 No effort/energy at all (0)
- ☐ 1 Light effort/energy (1)
- ☐ 2 Some effort/energy (2)
- ☐ 3 A lot of effort/energy (3)
- ☐ 4 An extreme amount of effort/energy (4)

End of Block: Daily Efforts

Start of Block: Racial Interaction

RA_Ins

For the next set of questions, we are interested in your willingness to meet and interact with different people.

On the following screens, you will see pictures of several different people.

Please use the scales provided to indicate the extent to which you are willing to meet or interact with each of them, based on the impressions you form from their pictures.

AF224

To what extent would you be **willing to meet or interact (e.g., talk to) with** this person (depicted in the picture)?

- ☐ 0 Not at all (0)
- ☐ 1 (1)
- ☐ 2 (2)
- ☐ 3 (3)
- ☐ 4 Somewhat (4)
- ☐ 5 (5)
- ☐ 6 (6)
- ☐ 7 (7)
- ☐ 8 Very much so (8)

AM221

To what extent would you be **willing to meet or interact (e.g., talk to) with** this person (depicted in the picture)?

- ☐ 0 Not at all (0)
- ☐ 1 (1)
- ☐ 2 (2)
- ☐ 3 (3)
- ☐ 4 Somewhat (4)
- ☐ 5 (5)
- ☐ 6 (6)
- ☐ 7 (7)
- ☐ 8 Very much so (8)

BF043

To what extent would you be **willing to meet or interact (e.g., talk to) with** this person (depicted in the picture)?

- ☐ 0 Not at all (0)
- ☐ 1 (1)
- ☐ 2 (2)
- ☐ 3 (3)
- ☐ 4 Somewhat (4)
- ☐ 5 (5)
- ☐ 6 (6)
- ☐ 7 (7)
- ☐ 8 Very much so (8)

BM039

To what extent would you be **willing to meet or interact (e.g., talk to) with** this person (depicted in the picture)?

- ☐ 0 Not at all (0)
- ☐ 1 (1)
- ☐ 2 (2)
- ☐ 3 (3)
- ☐ 4 Somewhat (4)
- ☐ 5 (5)

TS_Ins

TODAY, how much time did you spend doing each of the following activities?

TS1 Watching a favorite TV show/movie

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS2 Binge-watching a TV show

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS3 Reading a favorite book/blog

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS4 Reading about a favorite celebrity

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS5 Watching your favorite YouTube personalities

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS6 Playing an online/group video game

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS7 Reading/listening to the news

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS8 Scrolling friends' social media posts

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS9 Posting to social media

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS10 With friends (face-to-face, not online)

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS11 With family (face-to-face, not online)

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS12 With romantic partner (face-to-face, not online)

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS13 Around strangers

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS14 Out in public

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS15 In a religious observance (e.g., prayer, church)

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS16 In a social gathering (5 or more people)

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS17 Self-isolating/social-distancing

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS18 Working/studying

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

TS19 Reading/researching non-mainstream news (news that is not distributed by major news networks)

- ☐ No Time (0)
- ☐ 1 hour or less (1)
- ☐ 2-4 hours (2)
- ☐ 5-6 hours (3)
- ☐ >7 hours (4)

End of Block: Time Spent

Start of Block: TIPI

TIPI_Ins Here are a number of personality traits that may or may not apply to you. Please choose a number on the provided scales to indicate the extent to which you agree or disagree with that statement. You should rate the extent to which the pair of traits applies to you, even if one characteristic applies more strongly than the other.

TIPI1 I see myself as: extraverted, enthusiastic.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI2 I see myself as: critical, quarrelsome.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI3 I see myself as: dependable, self-disciplined.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI4 I see myself as: anxious, easily upset.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI5 I see myself as: open to new experiences, complex.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI6 I see myself as: reserved, quiet.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI7 I see myself as: sympathetic, warm.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI8 I see myself as: disorganized, careless.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI9 I see myself as: calm, emotionally stable.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

TIPI10 I see myself as: conventional, uncreative.

- ☐ Disagree strongly (1)
- ☐ Disagree moderately (2)
- ☐ Disagree a little (3)
- ☐ Neither agree nor disagree (4)
- ☐ Agree a little (5)
- ☐ Agree moderately (6)
- ☐ Agree strongly (7)

End of Block: TIPI

Start of Block: MAQ

MAQ_Ins

Please respond to each of the following statements by expressing how much you agree with

it (if you do generally agree) or how much you disagree with it (if you generally disagree).

Please be as accurate as you can throughout, and try especially hard not to let your answer to any one item influence your answer to any other item. Treat each item as though it is completely unrelated to the others.

There are no right or wrong answers; you are simply to express your own personal feelings and opinions.

MAQ1 When I'm close to someone, it gives me a sense of comfort about life in general.

- ☐ I disagree with this statement a lot (1)
- ☐ I disagree with this statement a bit (2)
- ☐ I agree with this statement a little (3)
- ☐ I agree with this statement a lot (4)

MAQ2 I often worry that my partner doesn't really love me.

- ☐ I disagree with this statement a lot (1)
- ☐ I disagree with this statement a bit (2)
- ☐ I agree with this statement a little (3)
- ☐ I agree with this statement a lot (4)

MAQ3 I have trouble getting others to be as close as I want them to be.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ4 I find it easy to be close to others.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ5 I often worry my partner will not want to stay with me.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ6 Others want me to be more intimate than I feel comfortable being.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ7 It feels relaxing and good to be close to someone.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ8 I am very comfortable being close to others.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ9 I don't worry about others abandoning me.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ10 My desire to merge sometimes scares people away.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ11 I prefer not to be too close to others.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ12 I find that others are reluctant to get as close as I would like.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ13 I get uncomfortable when someone wants to be very close.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

MAQ14 Being close to someone gives me a source of strength for other activities.

- ☐ I **disagree** with this statement a lot (1)
- ☐ I **disagree** with this statement a bit (2)
- ☐ I **agree** with this statement a little (3)
- ☐ I **agree** with this statement a lot (4)

End of Block: MAQ

Start of Block: Trust

Trust1 Generally speaking, would you say that most people can be trusted or that you can't be too careful in dealing with people?

- ☐ Most people can be trusted (1)
- ☐ Can't be too careful. (2)

Trust2 Would you say that most of the time, people try to be helpful, or that they are mostly just looking out for themselves?

- ☐ Try to be helpful (1)
- ☐ Looking out for themselves (2)

Trust3 Do you think that most people would try to take advantage of you if they got the chance or would they try to be fair?

- ☐ Take advantage (1)
- ☐ Try to be fair (2)
